RE: RoHS Compliance

Dear Supplier,

As you may know, the European Union has enhanced the Directive 2011/65/EU, commonly referred to as RoHS (Restricted use of certain Hazardous Substances). This directive bans the introduction of products that contain in excess of allowable concentrations, six identified hazardous chemicals. As a supplier to Lytron your products are integrated into our equipment which is sold worldwide. Lytron is committed to meeting the International Environmental compliancy laws currently in place in many countries. Meeting the compliancy standard will impact both Lytron's and your ability to sell product in the European Union starting 2 January 2013.

In order for Lytron to insure that its products are compliant to this initiative, it is necessary for us to require you to certify that the materials or components we purchase from you are compliant to this directive.

Attached, please find a Materials Declaration form that we require you to complete for each of the part numbers listed.

Moving forward, should any of the materials or components used in the manufacture of the part numbers we purchase from you be changed or replaced, we require that you re-certify your compliance to the initiative by notifying Lytron and indicating the part number affected and the change indicated.

Please be advised that the completion of the attached Material Declaration form will become a condition of continued business with Lytron.

If you have other documentation that certifies the materials or components we purchase from your company are compliant to the RoHS directive, you may provide this certification in lieu of the attached.

If you have any further questions please contact our Purchasing Department.

Thanks you for your assistance.

Regards,

Jill Porreca  
RoHS Compliance Associate
